

Question 1: Will NASA accept our on-ramp proposal submission in a digital PDF format by email in lieu of 7 hardcopies?

Answer 1: Proposal submissions must be compliant with RFP NNK13ZLS004Q-Revision-A. Offerors must provide one (1) original plus seven (7) hard copies that conform to the requirements listed in Section L.4, Proposal Instructions, of the RFP.

Question 2: Is NASA interested in additional flight support equipment that will enable constellation deployment, such as adapters that will enable multiple CubeSat dispensers being mounted to ESPA rings? If so, what CLIN should we put this under?

Answer 2: Currently, NASA does not have a requirement for additional flight support equipment under this RFP.

Question 3: We are developing a CubeSat dispenser that has not yet reached Critical Design Review (CDR), but we intend on reaching this milestone within 2015. Can we propose this new CubeSat dispenser, despite not yet reaching CDR? We intend for this dispenser to be available beginning in 2016.

Answer 3: Any products proposed shall be technically compliant with the Statement of Work entitled, "Attachment A – CubeSat Dispenser Hardware and Mission Integration Services." NASA requests potential offerors defer the proposal of any product still in development until the on-ramp period in which it is fully developed. Please note: In accordance with RFP NNK13ZLS004Q-Revision-A, each October during the life of this contract, or at any other time established via synopsis, the Government will request proposals from new CubeSat dispenser and integration services providers for IDIQ contracts and proposals from existing IDIQ contractors for additional CubeSat dispenser and integration services. If the Government issues a solicitation notice, new providers and current IDIQ contractors will be allowed to submit proposals within the notice's stated response time.
